Not illustrated. 1916 edition. Excerpt: . determine if gains made in the dry lot thru the summer are as economical as those made on pasture. i VII. To determine the ultimate profit or loss margin per baby beef on the entire operation, covering producing, feeding, management and marketing. METHODS OF EXPERIMENTATION ANIMALS USED The breeding herd, maintained at from 75 to 90 head, consisted of older cows and heifers, all home grown. They were high grade Herefords, well marked, conforming to good beef type. They represented the results of persistent grading-up for 25 years, thru the use of good bulls and the selection of the best females of each year s calf crop for the breeding herd. Cows that would not produce and raise their calves well were culled out each year for market and replaced by the home raised twoyear-old heifers. The bulls used were, for the most...

### Reviews

*This publication is really gripping and exciting. It really is basic but unexpected situations in the 50 % in the book. It is extremely difficult to leave it before concluding, once you begin to read the book.*

-- Prof. Salvador Lynch

*This pdf will never be straightforward to get going on studying but quite enjoyable to read through. This is certainly for all those who statte there was not a really worth studying. You are going to like the way the blogger publish this publication.*

-- Mrs. Adah Sawayn
